FIELD MANUAL

No. 30-16

HEADQUARTERS
DEPARTMENT OF THE ARMY
WASHINGTON, D.C., 31 August 1972

TECHNICAL INTELLIGENCE

	Paragraph	Page
CHAPTER 1. GENERAL		
Section I. Introduction	1-1—1-5	1-1, 1-2
Section II. The strategic effort	1-6—1-9	1-2, 1-3
CHAPTER 2. ARMY TECHNICAL INTELLIGENCE		
Section I. Introduction	2-1—2-3	2-1, 2-2
Section II. Field army organization for technical intelligence	2-4—	2-2—
	2-6	2-5
CHAPTER 3. TECHNICAL INTELLIGENCE FUNCTIONALIZATION		
Section I. General	3-1	3-1
Section II. Communication-electronics intelligence	3-2, 3-3	3-1, 3-2
Section III. Weapons and munitions intelligence	3-4, 3-5	3-3
Section IV. General support and equipment intelligence	3-6—	3-4,
	3-10	3-5
Section V. Mobility intelligence	3-11, 3-12	3-5
Section VI. Medical intelligence	3-13—	3-6,
	3-15	3-7
CHAPTER 4. TECHNICAL INTELLIGENCE PLANNING	4-1—4-5	4-1, 4-2
Section 5. COLLECTION AND COLLECTION AGENCIES		
Section I. Introduction	5-1, 5-2	5-1
Section II. Collection agencies	5-3—	5-2—
	5-15	5-5
CHAPTER 6. RECOVERY AND EVACUATION OF FOREIGN EQUIPMENT AND DOCUMENTS		
Section I. Introduction	6-1, 6-2	6-1
Section II. Recovery and evacuation of materiel	6-3—	6-1—
	6-9	6-7
Section III. Recovery and evacuation of technical documents	6-10—6-12	6-7
CHAPTER 7. PROCESSING, DISSEMINATION, AND USE		
Section I. Processing	7-1—7-5	7-1, 7-2
Section II. Aspects of technical intelligence production	7-6—7-9	7-2, 7-3
Section III. Technical intelligence reports	7-10—	7-4,
	7-13	7-5
Section IV. Dissemination and use	7-14, 7-15	7-6
CHAPTER 8. STABILITY OPERATIONS		
Section I. Introduction	8-1, 8-2	8-1
Section II. Responsibilities	8-3—8-5	8-2
Section III. Procedures	8-6—	8-2—
	8-14	8-5
APPENDIX A. REFERENCES		A-1
Section B. MAJOR CATEGORIES OF TECHNICAL INTELLIGENCE		B-1
Section C. EXAMPLE OF TECHNICAL INTELLIGENCE PLAN		C-1
Section D. HANDLING AND REPORTING OF CAPTURED ENEMY EQUIPMENT AND DOCUMENTS (STANAG 2028)		D-1
Section E. NOMENCLATURE FOR SOVIET BLOC ARMY WEAPONS AND EQUIPMENT (STANAG 2097)		E-1
INDEX		Index-1

* This manual supersedes FM 30-16, 28 February 1969.

CHAPTER 1

GENERAL

Section I. INTRODUCTION

1-1. Purpose

This manual sets forth doctrine and establishes procedures for the management, planning, and collection of information which, upon evaluation and production into intelligence, is reported and disseminated as Army technical intelligence. It provides guidance for commanders, staff officers, and other personnel and units, and aids in understanding the concept and role of technical intelligence in the overall intelligence requirements of the commander.

1-2. Scope

a. The contents of this manual deal primarily with technical intelligence organizations and the objectives and functions of technical intelligence operations. The manual outlines procedures and establishes broad principles regarding the role of military intelligence units engaged in technical intelligence activities. In addition, it identifies those sources and agencies available to assist in accomplishing the technical intelligence requirements of the commander. Engineer topographic and terrain intelligence are discussed in FM 5-30 and FM 30-10; consequently, they are not included within the scope of this manual.

b. The material presented herein is applicable to general war, limited war, and cold war situations. Such situations include stability operations, nuclear and nonnuclear warfare environments, and employment of chemical agents/munitions and nuclear weapons. Protection from chemical and biological agents and radioactive fallout is also included.

c. This manual is in consonance with the following international standardization agreements, which are identified by type of agreement and number at the beginning of each appropriate chapter and appendix in the manual:

Title	NATO	CENTO	SEATO	ABCA
	STANAG	STANAG	SEASTAG	SOLOG
Handling and Reporting of Captured Enemy Equipment and Documents	2084	2084	2084	94
Nomenclature for Soviet Bloc Army Weapons and Equipment	2097	2097	—	—

1-3. Recommended Changes

Users of this manual are encouraged to submit recommendations to improve its clarity or accuracy. Comments should be keyed to the specific page, paragraph, and line of the text in which the change is recommended. Reasons should be provided for each comment to insure understanding and complete evaluation. Comments should be prepared using DA Form 2028 (Recommended Changes to Publications) and forwarded direct to the Commanding Officer, US Army Combat Developments Command Intelligence Agency, Fort Huachuca, Arizona 85613. Originators of proposed changes constituting significant modification of approved Army doctrine may send an information copy, through command channels, to the Commanding General, USACDC, Fort Belvoir, Virginia 22060. This action will facilitate review and followup.

1-4. Definitions

a. For definition of terms used see AR 310-25.

b. The relationship of intelligence and technical intelligence is set forth below:

(1) Intelligence is the product resulting from the collection, evaluation, analysis, integration, and interpretation of all information concerning one or more aspects of foreign countries or areas which are immediately or potentially significant to the development and execution of military plans, policies, operations, and development of

military equipment. Technical intelligence, which is one aspect of military intelligence, plays a vital role in the tactical and strategic intelligence picture and therefore must be considered as part of an overall integrated intelligence effort.

(2) Technical intelligence is that intelligence concerning foreign technological developments and the performance and operational capabilities of foreign materiel, which now or may eventually have a practical application for military purposes. As with all other intelligence, it is the end product resulting from the collection and processing of technical information. The scope of technical intelligence is broad. It includes all technical aspects of foreign equipment, supplies, installations, facilities, communications, and captured or abandoned items which have a practical application in furthering military operations. The scope also includes technical data (i.e., signal parameters/characteristics/frequency operating modes, etc.) of foreign communications equipment which are derived through communication intelligence (COMINT), electronic intelligence (ELINT), and electronic warfare support measures (ESM), as well as captured friendly and allied materiel that may have been in the hands of a hostile force. Technical intelligence, then, contributes primarily to the extension of the combat intelligence effort. (See appendix B for categories of technical intelligence.)

Section II. THE STRATEGIC EFFORT

1-6. Introduction

a. The objectives of strategic technical intelligence are to—

(1) Determine capabilities, limitations, and vulnerabilities of foreign technology, materiel, facilities, and installations.

(2) Exploit foreign technologies for the benefit of US Forces.

(3) Assist in the development of effective countermeasures by providing intelligence to the overall military research and development (R&D) effort.

(4) Provide materiel and information upon which to base the training of all Armed Forces personnel.

b. The overall military technical intelligence program is vital to the US national, scientific, and technical intelligence effort. The technical intelligence organization of the Department of Defense (DOD) includes elements of the Defense Intelli-

1-5. Scientific and Technical Intelligence

a. Scientific and Technical (S&T) Intelligence includes that foreign intelligence relating to basic and applied research in natural and applied sciences, and in applied engineering techniques. Also included are the scientific and technical characteristics, capabilities, and limitations of all foreign military systems, weapons, weapons systems, and other materiel; production methods employed in their manufacture; and related technology pertaining to materiel operation, and logistic support.

b. Within the Department of the Army, the Assistant Chief of Staff for Intelligence (ACSI) has general staff responsibility for all matters pertaining to intelligence and counterintelligence activities. The organizational element within ACSI which exercises general staff supervision over S&T intelligence activities of the Army is the Scientific and Technical Division, Directorate of Foreign Intelligence. This division monitors intelligence produced and the intelligence activities involved in this production to determine that weapons and equipment, scientific, nuclear, chemical, missile, space, and electronic requirements levied on DA production facilities are fulfilled. This division also provides DA representation on scientific and technical committees and working groups of the U.S. Intelligence Board (USIB).

gence Agency (DIA) and the three services or military departments: Department of the Army, Department of the Navy, and the Department of the Air Force.

1-7. Defense Intelligence Agency

a. DIA coordinates the intelligence activities of the three military departments and satisfies the intelligence requirements of the Joint Chiefs of Staff and DOD. In the area of technical intelligence, DIA is responsible for the overall management and review of all technical intelligence activities throughout DOD.

b. The action element of DIA for its technical intelligence responsibility is the Directorate of Scientific and Technical Intelligence. Direct communication or coordination is authorized between this directorate and the external technical intelligence agencies on nonpolicy matters relating to the production of S&T intelligence. The principal

producers of technical intelligence within DOD are—

(1) Directorate of Scientific and Technical Intelligence of DIA.

(2) Foreign Science and Technology Center (FSTC) of the US Army Materiel Command (USAMC)

(3) Missile Intelligence Agency (MIA) of the Army Missile Command of USAMC.

(4) Medical Intelligence Office of the Office of the Surgeon General of the Army.

(5) Scientific and Technical Intelligence Center (STIC) of the Department of the Navy.

(6) Foreign Technology Division (FTD) of the Department of Air Force.

1-8. Strategic Role of DA Agencies

a. ACSI, DA, with general staff responsibility for all S&T intelligence activities in the Army, performs the following functions:

(1) Formulates policies and procedures which insure that S&T intelligence activities of the Army are carried out in the most efficient and productive manner.

(2) Supervises the preparation and execution of the Army S&T intelligence program, in coordination with DIA, and provides for its integration into the DOD Consolidated Intelligence Program (CIP).

(3) Coordinates requirements for technical intelligence originated by the DA staff and major subordinate commands to insure that they are fulfilled.

b. USAMC is responsible for commanding, operating, and managing two major CONUS-based Army S&T production agencies: FSTC and the USAMC Missile Intelligence Agency of the Missile Command. USAMC, through its subordinate agencies, is responsible for providing U.S. strategic planners the military R&D effort and the military S&T effort with timely and appropriate technical intelligence, with the exception of medical S&T intelligence.

c. The Surgeon General of the Army is responsible for commanding, operating, and managing the Medical S&T Branch which is part of the Medical Intelligence Office.

d. The Chief of Engineers has DA staff responsibility to provide program guidance to Army component commands on requirements for military geographic intelligence, as outlined in FM

5-30. Within the Corps of Engineers, the US Army Topographic Command (USATOPCOM) is the primary element that deals with national level, strategic intelligence.

e. The US Army Security Agency (USASA) is responsible for the exploitation of cryptologic and other materiel in support of its assigned mission areas as outlined in AR 10-122 and FM 32-10. In addition, signal intelligence (SIGINT) and ESM resources also compile technical data on the characteristics of foreign communications-electronics equipment derived from intercept and analysis of electromagnetic emissions.

f. Oversea commands are responsible for collecting and producing S&T intelligence within their capabilities and in accordance with validated DIA requirements. They are also responsible for exploiting and evacuating materiel to CONUS as appropriate. Reference AR 755-2 and AR 381-9.

1-9. Strategic Procedures

a. A requirement for technical intelligence may be originated by any agency or consumer within the Army. Frequently, however, a research and development (R&D) activity or major CONUS command may levy this requirement upon military intelligence resources.

b. Requirements are prepared using DD Form 1497 for intelligence production requirements and forwarded to DIA for validation and tasking. The DIA tasking procedure recognizes the need for direct departmental support. In turn, this support will enable the production agencies to provide support to DA and intermediate headquarters for quick reaction needs, briefings, and special purpose documents. Direct support tasks in response to such requirements may be levied by the ACSI, DA, on the FSTC, the Missile Intelligence Agency, or the Medical Intelligence Office. The CG, USAMC may levy direct support requirements on FSTC and the Missile Intelligence Agency. The Surgeon General may levy direct support requirements on the Medical Intelligence Office. The Army organization for strategic technical intelligence is shown in figure 1-1. As requirements are satisfied, the information and/or materiel are forwarded direct, or through major oversea command channels, to CONUS. Unless specific instructions to the contrary are given by a DA agency, all items for CONUS exploitation will be forwarded to the Commanding General, US Army

Figure 1-1. Army organization for strategic technical intelligence.

Test and Evaluation Command, ATTN: STEAP-FI, Aberdeen Proving Ground, Maryland 21005, in accordance with provisions of the theater command. After foreign materiel has been received at Aberdeen Proving Ground, the decision as to the site of actual exploitation of medical materiel is determined by the Surgeon General or his designated agent. A detailed exploitation plan will be furnished ACSI by the agency designated to perform the exploitation.

c. The major DA S&T intelligence production effort in CONUS is located at FSTC, Missile Intelligence Agency, and the Medical Intelligence Office. To consolidate the efforts of these organizations, DIA has established a system which standardizes S&T intelligence management and production procedures for the overall DOD S&T intelli-

gence production effort. In addition, certain responsibilities for production of S&T intelligence have been assigned within DIA and to the military departments.

d. Final technical intelligence reports are disseminated to various consumers in accordance with previously submitted statements of intelligence interest. A continual feedback of information from overseas producers to DIA and from DIA and CONUS-producing units to the overseas major commands is essential to the effectiveness of the entire technical intelligence program. The distribution of technical information from CONUS-producing units is made by DIA to the overseas command to insure that military intelligence units are kept abreast of important foreign technical and scientific trends and developments.

CHAPTER 2

ARMY TECHNICAL INTELLIGENCE

Section I. INTRODUCTION

2-1. General

The United States must strive to maintain a position superior to all enemies and potential enemies in any given area of technology and be alert to the future technological developments of all nations. In order to obtain this position the objectives of technical intelligence are to:

a. Determine foreign technical materiel threats as they affect strategic and tactical planners and commanders.

b. Determine foreign technological capabilities and limitations.

c. Provide information from which military countermeasures are developed.

d. Provide information which will enable US Forces to use foreign materiel and facilities.

e. Exploit new developments for US military needs.

f. Obtain and exploit items in the DIA Registry, Foreign Materiel Requirements Listing.

g. Provide input on a continuous basis to the overall national integrated S&T intelligence program in consonance with theater policies.

h. Provide the technical intelligence aspects for tactical and strategic studies on characteristics, capabilities, and limitations of foreign facilities, installations, materiel, and resources.

2-2. Mission of Tactical Technical Intelligence Units

a. The mission of Army tactical technical intelligence units is to provide assistance to tactical commanders through the selective examination, evaluation, and classification of technical information derived from exploitation of foreign materiel and facilities, and provide assistance in establishing security measures to prevent foreign examination of U.S. equipment and information.

b. Tactical technical intelligence units/personnel at all levels perform a fourfold mission:

(1) They advise and assist the commander and staff in meeting tactical planning needs in technical areas.

(2) They assist the strategic S&T intelligence effort by supporting theater DA and DOD agencies in the overall integrated technical intelligence collection and analysis effort.

(3) They assist with training of units in collection procedures.

(4) They advise units of current technical intelligence requirements.

c. US Army tactical technical intelligence units are provided primarily to support the field army commander's technical intelligence requirements. These military technical intelligence units provide on the spot field analysis, detailed analysis, and limited operational data from field testing. These units are often in a position to make recommendations for exploitation and/or countermeasures. Detailed analysis and evaluation are performed by the technical intelligence company of the field army and/or higher echelons. Final and detailed technical analysis beyond field army and/or theater resources is performed in the appropriate CONUS-producing unit.

d. Technical intelligence elements at all echelons operate as functionally integrated teams to insure maximum coordination, collation, and exploitation of foreign arms and materiel.

e. Prompt exploitation at the lower echelons provides usable tactical intelligence, assists in the production of strategic technical intelligence, facilitates military training, and assists the overall national R&D effort.

f. In unified or specified commands, the factors of distance and processing time from the zone of interior may make it desirable for the commander's intelligence organizations to perform certain
